

QUEST Code Challenge: Funny Bot

how to execute software

My funny bot contains 4 files:

1. bot.js
2. index.html
3. jokes.js
4. main.css

for execution just run index.html file.

Instructions

- I Build a piece of code that displays a random joke based on a smylies category chosen by the user. (In each category 10 jokes define)
- After each joke, if the user clicks another category another joke will appear
- There are 8 categories for the user to choose a joke from and each category contains 10 different jokes

- The user should not be able to choose a category that's not available.

```
challenge > JS botjs > PickJoke
1 function PickJoke(category) {
2   document.getElementById("demo").innerHTML = Jokes[Math.floor(Math.random() * 10) + category];
3 }
4 function myFunction(button) {
5   var x = button.id;
6   PickJoke(parseInt(x));
7 }
8
```
